

Test picture for monitors

Click here for more TestScreen pictures

The screenshot displays a software interface for monitor testing. It features a central area with several test patterns: a resolution test (a grid of lines forming a circle), a convergence test (a grid of lines forming a square), a color scale (a vertical bar with a rainbow spectrum), and a color bar (a horizontal bar with a rainbow spectrum). The interface is surrounded by a grid of small thumbnail images. At the bottom of the screenshot, there is a text overlay: **Purchase 'TestScreens' Only 9.95€** and an **Add to Cart** button.

The program contains of course no pictures, this is just screenshots from a monitor. All test images is generated on the basis of the resolution of the tested monitor. TestScreen is a necessary tool for repair and adjustment of monitors. TestScreen generates test patterns for Resolution, Moiré, Convergence, Basic Colors, Color Scales, Brightness and Stability.
